Arrays

1. **Create a program to read and print all elements of an `int` array.**
   → Input: 5 integers. Output: print all elements.

2. **Find the sum and average of elements in a `double` array.**
   → Input: 5 double values.

3. **Count the number of vowels in a `char` array.**
   → Input: {'a','b','c','e','i'} → Output: 3

4. **Find the longest word in a `String` array.**
   → Input: {"Java", "Array", "Programming"}

5. **Write a program to count how many `true` values are there in a `boolean` array.**
   → Input: {true, false, true, true} → Output: 3

6. **Check if a given `int` array is sorted in ascending order.**
   → Input: {1, 2, 3, 5, 4} → Output: false

7. **Find the second largest element in an `int` array.**

8. **Reverse a `String` array without using any inbuilt function.**

9. **Replace all even numbers with 0 in an `int` array.**

10. **Write a program to rotate an array to the left by 1 position.**
    → Input: {1, 2, 3, 4} → Output: {2, 3, 4, 1}

11. **Create and display a 2x3 `int` matrix.**

12. **Find the row-wise sum of a 3x3 `int` matrix.**

13. **Find the diagonal sum of a 3x3 square `int` matrix.**
14. **Create a `Student` class with name and marks. Create an array of 3 students and print their data.**
15. **Create an `Employee` class with id and salary. Find the employee with the highest salary.**
16. **Create a `Book` class with title and price. Count how many books are priced above 500.**
