

For- each LOOP

1. Print All Elements

Given an integer array {1, 2, 3, 4, 5}, use a for-each loop to print all elements.

2. Sum of Elements

Given a double array {2.5, 3.0, 4.5, 1.0}, calculate and print the **sum** of all elements using a for-each loop.

3. Count Vowels

Given a char array {'a', 'e', 'i', 'o', 'u', 'b', 'c'}, count how many vowels are present using a for-each loop.

4. Find Maximum

Given an integer array {10, 45, 23, 89, 12}, find the **maximum element** using a for-each loop.

5. Square and Print

Given an integer array {2, 4, 6, 8}, use a for-each loop to print the **square** of each number.

6. Count Even Numbers

Given an integer array {1, 4, 6, 9, 10, 13}, count how many **even numbers** are present using a for-each loop.

7. Sum of Row Elements (2D array)

Given a 2D int array:

```
int[][] matrix = {  
    {1, 2},  
    {3, 4},  
    {5, 6}};
```

Use nested for-each loops to print the sum of each row.
