

STRINGS

- **Print Each Character**

Write a program that takes the input "Java" and prints each character on a new line.

- **Count Total Characters**

Write a program that takes the input "Hello World" and counts the total number of characters, excluding spaces.

- **Check Palindrome**

Write a program that takes the input "madam" and checks if the string is a palindrome or not.

- **Reverse a String**

Write a program that takes the input "Fynd" and prints the reversed string.

- **Count Vowels and Consonants**

Write a program that takes the input "Programming" and counts the number of vowels and consonants.

- **Convert Case**

Write a program that takes the input "HeLlO" and converts all characters to lowercase, then to uppercase.

- **Concatenate Two Strings**

Write a program that takes two strings: "Hello" and "World", and prints their concatenation: "HelloWorld".

- **Compare Two Strings**

Write a program that takes two strings: "Apple" and "apple", and checks if they are equal:

- Case-sensitive comparison
- Case-insensitive comparison

9. **Find Substring**

Write a program that takes the input "Java Programming" and checks if the substring "Program" exists in it.

10. **Replace a Character**

Write a program that takes the input "banana" and replaces all occurrences of 'a' with 'o', resulting in "bonono".
